

Shenzhen SYT Technology Co., Ltd.

Product Development Support • Supply Chain Execution • Quality Control

Helping customers turn product ideas into reliable, manufacturable and deliverable products.

Speed

Fast response and local execution

Yield

Manufacturable, quality-driven results

Transparency

Clear status, risks and next steps

Contents

01

Who We Are

A Shenzhen-based execution partner

03

Industries We Support

Consumer electronics, healthcare devices and electro-mechanical products

05

Quality & CM Partnership

Process control and real CM cooperation

02

What We Do

Product development, sourcing, quality and delivery support

04

How We Work

A staged approach from requirements to stable delivery

06

Contact

Let's build reliable delivery together

Who We Are

A Shenzhen-based operation partner for product development, manufacturing and delivery.

SYT connects customers, suppliers and factories to move projects from idea to stable delivery.

- Founded and operated by an experienced manufacturing / operations leader with 17+ years in electronics and electro-mechanical products.
- Hands-on support across supplier development, project management, CM coordination, quality follow-up and shipment execution.
- Built for customers who need fast, transparent and practical execution in China-based supply chains.

Our Role

**A practical bridge
between product owners
and manufacturing resources.**

Not just sourcing.
Not just consulting.
Execution from concept to delivery.

Core Capabilities

Service scope for international customers and project owners.

1

Product Development Support

Mechanical review
Prototype coordination
DFM input & redesign support
Technical follow-up

2

Supplier Development

Supplier identification
Supplier evaluation
Components & tooling
Assembly, packaging & processes

3

Manufacturing Coordination

Build real CM partnership
Align requirements
Solve issues early
Secure stable delivery

4

Quality Control

IQC / IPQC / OQC follow-up
Inspection planning
Issue tracking & corrective actions
Onsite quality support

5

Supply Chain Execution

BOM sourcing
Lead-time follow-up
PO & shipment support
Transparent communication

6

Project Management

Milestone tracking
Risk escalation
Cross-functional coordination
Practical problem solving

Industries We Support

Experience across electronics, medical / healthcare devices and industrial products.

Consumer Electronics

Smart heating products,
Smart home devices,
HVAC controllers, stylus products,
touch panel modules, and
portable consumer electronics.

Medical & Healthcare Devices

Wearable health devices,
sleep monitoring products,
sensor-based monitoring devices,
and healthcare electronics.

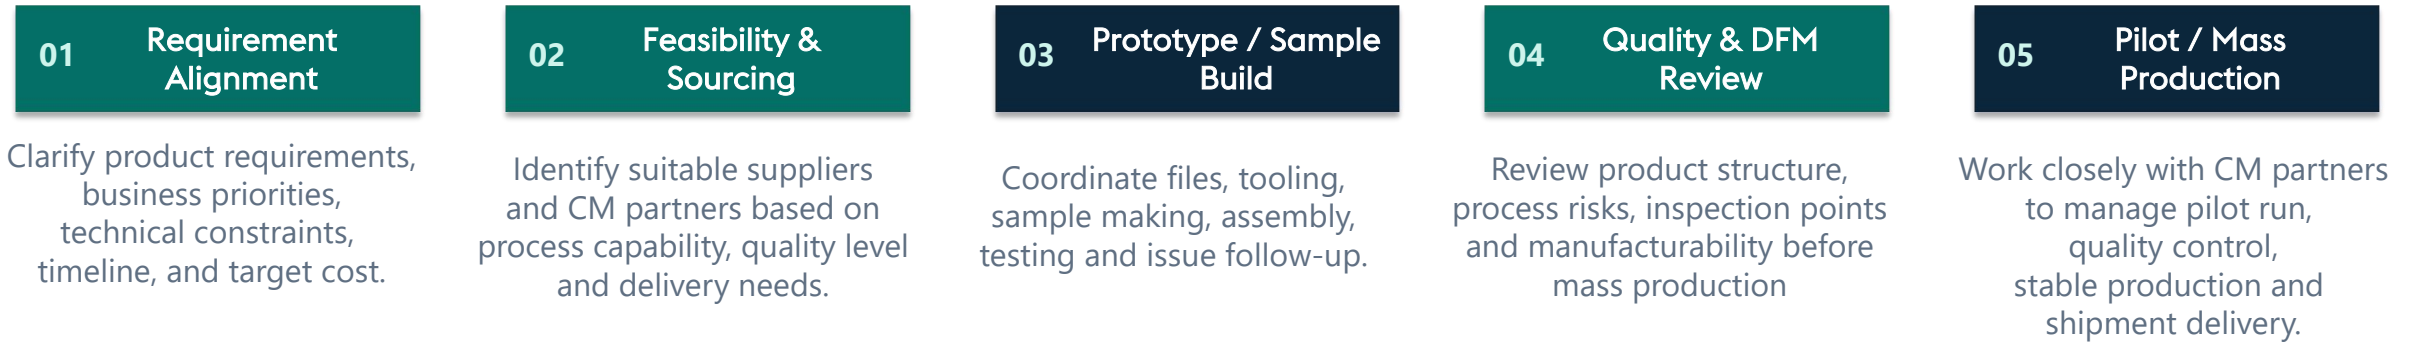

Industrial / Electro- mechanical

Tracking devices,
plastic and silicone parts,
mechanical assemblies,
PCBA-related products, and
special component sourcing

Typical project needs: redesign · sourcing · samples · pilot run · CM control · quality follow-up · shipment execution

How We Work

A staged approach to control cost, timeline and technical risk.

Typical validation flow supported: EVT · DVT · PVT · MP

Principle: Define the next practical step clearly before heavy investment.
Build real partnership with CM factories to ensure stable production, quality control and reliable delivery.

Quality Management Focus

Quality is managed through process control, not last-minute inspection only.

Our quality approach covers the full project flow:

1

Supplier Qualification

Factory capability review, sample review, process understanding and risk identification.

2

Incoming & In-process Control

IQC / IPQC checkpoints, issue tracking, feedback loop and corrective action follow-up.

3

Final Inspection & Issue Closure

OQC, shipment readiness review, defect summary and improvement tracking.

Typical Quality Outputs

- Inspection checklist
- Sample review report
- Issue list & action tracker
- Production readiness review
- Shipment inspection summary

Quality risks should be visible early, assigned clearly and closed before shipment.

Why Customers Work With SYT

A lean, hands-on partner for product development and manufacturing execution.

Speed

Fast response, local supplier access, and practical project coordination.

Hands-on Execution

Factory-facing follow-up instead of purely desk-based coordination.

Transparency

Clear communication on cost, lead time, risks and project status.

CM Partnership

Real partnership with CM factories to support stable production, quality follow-up and reliable delivery

CM Partnership Focus

Real CM partnership for stable production and reliable delivery.

How We Work With CM Partners

1 Real CM partnership

Work with CM factories as execution partners, not just transactional suppliers.

2 Stable production delivery

Align process, quality checkpoints, materials and delivery plan before production starts.

3 Onsite problem solving

Follow up issues directly with factories to close risks before shipment.

Built to support reliable production delivery through hands-on execution and real CM partnership

Let's Build Reliable Delivery Together

Practical support for product development, CM coordination and reliable manufacturing delivery.

Product Development Support

Concept review, redesign support, sample coordination and engineering follow-up.

CM Partnership

Work with CM factories as real execution partners to support stable production and delivery.

Quality Execution

Manage quality risks through process control, onsite follow-up and clear issue closure

Speed

Fast response and local execution

Yield

Manufacturable, quality-driven results

Transparency

Clear status, risks and next steps
